

How to Crack Windows XP Service pack 1

Here we go again! Well I woke up and learned that Windows XP Service pack 1 was out. I heard that impossible for me to install it. I wanted to test that out so I tried to install it and it would not let me. That upset me! So I took 2 hours out of my day and cracked it. I don't know how long and how much money it took Microsoft to set this service pack up but it took me 2 hours to crack it maybe they should give up on hole activation thing but I bet they will not. Here are the steps! Enjoy. This crack made by your friend Hankhill!

1. You will need to download a XP keygen. From Kazaa, IRC, ECT... What ever you like. Run the program and get a new "Product Key".
2. Next follow the next steps

Run regedit and go to:

HKey_Local_Machine\Software\Microsoft\WindowsNT\Current
Version\WPAEvents, on the right double click on "oobetimer" and change at least one digit of this value to deactivate windows.

Choose run from start menu and type in this command:

%systemroot%\system32\oobe\msoobe.exe /a to get the activation screen and go to the second option which is activate by phone.

In the new screen choose the option to change product key, and type in the new product key (Corporate one only).

Click update

Close that window, reboot your system and enter the command in step 2 for the second time to verify your activation, you should see "windows is already activated".

3. Next go to the Windows update page and install Windows XP Service pack 1
